

Humanetics Celebrates Opening of New McAllen Facility

HUMANETICS

Precision Metal Works

Humanetics, a leading metal fabrication company, celebrated the grand opening of its new facility in McAllen on Friday, February 6th with a ribbon-cutting ceremony that included the city mayor, local community leaders, and other dignitaries.

Friday's ribbon-cutting ceremony, performed by Art Holbrook, President and CEO at Humanetics, and Leo Montalvo, Mayor of McAllen, was followed by an open house that featured a tour of the new facility in the Rio Grande Valley.

"We are pretty excited about the expansion. We've come from a really little shop to having a little bit of breadth to us now," said Barrett Jenkins, senior vice president and general manager at Humanetics.

"The continuity that we can provide our customers in their supply chain is very important. There are not a lot of companies that can do what we do, and can boast the global footprint that we have," Jenkins told visitors.

Humanetics has established facilities in various locations around the world, including Dallas and Austin in Texas, as well as Wuxi in China, to better service customers' needs.

"We are very serious about our character. We are very serious about our integrity. And we take a lot of pride in what we do," added Jenkins. "We feel that distinguishes

us a great deal from our competitors."

Among the dignitaries that attended the event were Mike Allen, President and CEO of the McAllen Economic Development Corporation ("MEDC"), other MEDC staff members, representatives from McAllen Chamber of Commerce as well as the Greater Mission Chamber of Commerce.

"It's really a pleasure to see such enthusiasm," said Mike Allen. "I think this is the kind of company we are very proud to have, receive and welcome here."

McAllen Mayor Leo Montalvo also showed his welcome. "Let me welcome not only your company, but also all your employees. I hope you do well. If you do well, certainly McAllen will do well."

With state-of-the-art equipment, the new 100,000 sq. ft. facility has the capacity to service all the metal fabrication needs, such as welding, plating and assembly, of companies situated along the border between Texas and Mexico.

"We are a very well-diversified company. No single industry

occupies more than about 16 percent of our business on a monthly basis, so we are pretty proud of the diversity we have offered for our customer," said Jenkins.
